

Marin, the bot

Marin is an integrated AI chatbot built on RASA framework.

What is Rasa?

Rasa is an open-source framework for developing AI powered Chatbots. It is based on natural language understanding (NLU), dialogue management and interactions.

Why Rasa?

1. Easy to integrate and customize
2. Supports various intents and story modes

How?

Rasa Framework is used to understand the intent of Natural Language and proceed according to the options selected by user.

Marin sets-up an interactive platform between the user and the website thereby enabling his/her smooth sail towards the so-called 'circumventing' task of career counselling.

Test:

The test will contain questions based on personality, logical reasoning, numerical aptitude and verbal aptitude for the students of class 9-10. For classes 11-12 a test will have general aptitude along with some questions on core subjects to enable our team of counsellors recommend them the best fit courses.
